Professional Summary

Computer Science graduate and Software Engineer with hands-on experience designing, developing, testing, and deploying production full-stack and AI-powered applications using JavaScript, Node.js, Python, SQL, AWS, and PyTorch. Experienced owning end-to-end application development, integrating LLM workflows and REST APIs, and delivering database-backed software used by real operational teams.

Education

California State University Long Beach — **Long Beach, CA**
Bachelor of Science in Computer Science — *May 2026*

Work Experience

Software Engineer / Technical Operations — *February 2026 – Present*
Service All-Stars Plumbing Heating and Air — Bellflower, CA

- Independently designed, developed, tested, and deployed SmashAI/SmashTalk as the sole software engineer, delivering a production full-stack application that replaced a $4,536/year communications platform and contributed to $10K–$20K in projected annual company savings.
- Architected and integrated an AWS-hosted frontend, Node.js backend, PostgreSQL database, and ServiceTitan REST APIs, automating job synchronization and channel creation to reduce manual job-chat setup by 100% and save an estimated 8–12 dispatcher hours monthly.
- Built a PyTorch-based ML scoring system integrated with LLM workflows to analyze financial and operational data, rank 27 revenue opportunities, and generate actionable business recommendations, supporting $5K–$7K in first-month pilot revenue.
- Owned end-to-end application development and Git/GitHub release workflows, including feature implementation, regression testing, deployment, and production debugging across frontend, backend, PostgreSQL, REST APIs, and AWS infrastructure.
- Implemented and tested application security and reliability features, including authentication, role-based access controls, input validation, error handling, and production logging across client and server components.

Computer Support Technician — *November 2023 – October 2024*
F.E.C Computers — Downey, CA

- Troubleshot customer hardware and software issues across Windows systems, applications, peripherals, and system devices while explaining solutions clearly to non-technical users.
- Reviewed system records, service documents, and client information to identify errors, omissions, and next steps before completing requested service.
- Documented troubleshooting steps, resolutions, and outcomes to support accurate follow-up and future reference.

Academic & Technical Projects

C.H.A.D – AI-Powered Fitness and Diet App | 2024:

- Led a senior development team in building an AI-powered fitness and nutrition application using Python, PyTorch, and TensorFlow, contributing to model-driven functionality and application development.
- Coordinated iterative development, testing, data preprocessing, and validation while collaborating with team members to refine application features and machine-learning functionality.

Technical Skills

- **Cloud & DevOps:** AWS, Git/GitHub, Deployment Workflows
- **Full-Stack & Backend:** Node.js, REST APIs, Frontend/Backend Development, PostgreSQL, Relational Databases
- **AI/ML:** PyTorch, TensorFlow, Claude API, LLM Integration, Prompt Engineering
- **Data & Distributed Computing:** Apache Spark, PySpark (coursework)
- **Programming Languages**: Python, JavaScript, Java, C++, SQL, HTML/CSS
